- Detection area can be reduced by selecting the combination on the DIP switches to fit precisely for each specific application.
- Hold-time means the time period you would like to keep the lamp on 100% after the person has left the detection area.
- The daylight threshold can be set on DIP switches, to fit for particular application.
- This is the time period you would like to keep at the low light output level before it is completely switched off in the long absence of people. Note: 0 means on/off control; +∞ means 2 steps of dimming control, fixture never switch off.
- This is the dimmed low light output level you would like to have after the hold-time in the absence of people.
